Fantec NVMe31

Case for M.2 PCIe NVME SSD with optimised heat dissipation

The Fantec NVMe31 is a compact hard drive enclosure for the installation of one NVMe-SSD. This special type of SSD is known for its high transfer-rates. Thanks to the USB 3.1 Gen. 2 interface data-rates up to 10 Gbit/s are possible. Due to the easy and quick installation the SSD is ready for use in no time. Power is supplied via the USB 3.1 interface. The aluminium body ensures ideal protection of your data in mobile use.

Modern NVMe-SSDs get very warm and an effective heat dissipation is absolutely necessary. The passive cooling on the Fantec NVMe31 is supported by the integrated thermal pad. This makes the SSD „stick“ to the inside of the enclosure so the heat dissipation through the enclosure is optimised. This allows the advantage of speed of NVMe-SSDs to be used even in continuous use.
